WHITEPAPER AT A GLANCE

Contents

- 01 Executive Summary**
Purpose, scope, and what CATALINA does—and does not—claim.
- 02 Token & Contract**
Network, supply, contract controls, and ownership.
- 03 Tokenomics**
Approved allocation policy and intended reserve purposes.
- 04 On-chain Custody**
Point-in-time balances and Safe-controlled holdings.
- 05 Team Vesting**
Funded schedule, cliff, beneficiary, and release status.
- 06 Presale & Liquidity**
Published PinkSale terms and the remaining market gates.
- 07 Governance & Roadmap**
Custody model, completed steps, and pending launch work.
- 08 Security & Risks**
Verification practices, limitations, and disclosures.
- 09 Official Links**
Addresses and official verification surfaces.

HOW TO READ THIS DOCUMENT

Allocation tables describe approved policy. The custody snapshot describes balances actually observed on BNB Chain at one block. Live sale terms, pair addresses, and lock evidence must always be rechecked before a transaction.

01 Executive Summary

Catalina Token (CATALINA) is a fixed-supply, ERC-20-compatible token on BNB Smart Chain. The project's published launch framework prioritizes transparent allocation, role-based Safe multisig custody, funded team vesting, public sale rules, and on-chain verification.

The total supply is 300,000,000 CATALINA. The verified token contract exposes no public mint, burn, pause, blacklist, or transfer-tax control. Contract ownership is held by the Governance Safe rather than the original deployer wallet.

SAFE THRESHOLD

SCOPE

CATALINA is presented as a community token. This document does not claim revenue rights, guaranteed tokenholder voting rights, profit, price appreciation, or a completed PancakeSwap market. No utility, partnership, or audit is implied unless separately announced with verifiable evidence.

02 Token & Contract

Field	Verified value
Network	BNB Smart Chain (chain ID 56)
Name / symbol	Catalina Token / CATALINA
Standard	ERC-20-compatible token on BNB Chain (commonly called BEP-20)
Decimals	18
Total supply	300,000,000 CATALINA
Transfer tax	0%
Contract	0xB50CF7230BD52E1D7D964AffAeb82093fc884CD8
Current owner	0xb4bc73D6362a0BC76Db9B7b5379dA76cc8EE3621

The token contract was checked against BNB Chain at the snapshot block shown in this document. Source-code review and the live interface indicate that minting occurs only during construction; no public post-deployment mint function is exposed.

03 Tokenomics

The complete fixed supply is assigned to five policy allocations. These percentages describe the approved allocation model, while the custody table in Section 04 shows where the tokens were held at the review block.

Allocation	Purpose	Tokens	Share
Governance	Treasury, administration, and approved launch funding	60,000,000	20%
Liquidity	Launch and PancakeSwap liquidity reserve	36,000,000	12%
Community	Campaigns, rewards, and community growth	84,000,000	28%
Ecosystem	Partnerships, product, and ecosystem development	75,000,000	25%
Team vesting	Long-term team allocation under a funded vesting contract	45,000,000	15%
Total	Fixed supply	300,000,000	100%

ALLOCATION POLICY IS NOT A SPENDING PROMISE

Reserve labels state intended use. Actual transfers and expenditures remain subject to multisig approvals, execution, market conditions, and future public reporting.

04 On-chain Custody Snapshot

The balances below were read from BNB Chain at block 115,312,223 (2026-08-11 12:24:41 UTC). Together they account for the full 300,000,000-token supply.

Holder / role	Observed balance	Share
Governance Safe	52,007,500	17.3358%
Official PinkSale contract	7,992,500	2.6642%
Liquidity Safe	36,000,000	12%
Community Safe	84,000,000	28%
Ecosystem Safe	75,000,000	25%
Team vesting contract	45,000,000	15%
Total	300,000,000	100%

Reconciliation: the 60,000,000-token governance allocation is split at this snapshot between 52,007,500 CATALINA in the Governance Safe and 7,992,500 CATALINA funded to the official PinkSale contract. This replaces the earlier, inaccurate statement that the full 60M remained in the Safe.

05 Team Vesting

The team allocation is 45,000,000 CATALINA (15% of supply) and was fully funded to the published vesting contract. The vesting owner and beneficiary is the Governance Safe.

Vesting field	On-chain value
Contract	0x5A7FE274Ff5CCBB7345C2241DA59d3582Fda4d92
Beneficiary / owner	0xb4bc73D6362a0BC76Db9B7b5379dA76cc8EE3621
Start	23 July 2026, 00:00 UTC
Cliff	19 January 2027, 00:00 UTC (180 days)
End	22 July 2028, 00:00 UTC (730-day duration)
Released at snapshot	0 CATALINA

SCHEDULE INTERPRETATION

The schedule is linear from the start timestamp, but releases are unavailable before the 180-day cliff. At the cliff, the vested amount reflects the elapsed portion of the 730-day schedule; the 730 days do not begin after the cliff.

06 Presale & Launch Mechanics

The official website links to a public PinkSale launchpad contract. The sale contract held 7,992,500 CATALINA at the snapshot, and successful contribution transactions were visible on BscScan. Participants must still confirm the live PinkSale page immediately before transacting.

Published parameter	Term
Presale rate	1 BNB = 500,000 CATALINA
Listing rate	1 BNB = 420,000 CATALINA
Soft / hard cap	3 BNB / 10 BNB
Minimum / maximum buy	0.01 BNB / 1 BNB
Planned liquidity	75%
LP lock	365 days
Unsold-token handling	Refund to project wallet

06 Presale & Liquidity — Continued

MARKET STATUS AT PUBLICATION

The PinkSale presale is public. A verified official PancakeSwap pair address and LP-lock proof were not configured at the review snapshot. PancakeSwap trading must therefore be treated as pending, not live.

The project reserves 36,000,000 CATALINA for launch and PancakeSwap liquidity. The published sale configuration states a 75% liquidity allocation and a planned 365-day LP lock. Final liquidity amounts, pool version, pair address, position or LP token, lock provider, lock transaction, and unlock date must be published after finalization.

07 Governance & Roadmap

Governance in this document refers to operational custody and contract ownership through a 2-of-3 Safe. It does not, by itself, mean that CATALINA holders have deployed on-chain voting rights.

Status	Milestone	Evidence / next gate
Completed	Token deployed and source verified	Fixed supply and contract interface checked
Completed	Role-based Safes configured	Four distinct 2-of-3 Safe contracts verified
Completed	Ownership and allocations moved	Token owner is Governance Safe; reserves distributed
Completed	Team vesting funded	45M CATALINA deposited; zero released at snapshot
In progress	PinkSale presale	Official sale contract funded and public
Pending	Sale finalization	Complete only under PinkSale rules and live status
Pending	PancakeSwap market	Create and publish the verified official pair
Pending	Liquidity lock proof	Publish lock evidence and enable the site market gate

08 Security & User Protection

- Use only links reached from catalinatoken.com and compare the full token contract address.
- Never disclose a seed phrase, private key, password, or one-time authentication code.
- Read wallet prompts carefully; adding a token to a wallet is not the same as buying or transferring it.
- Treat direct messages claiming to be support, private sale offers, or guaranteed listings as untrusted.
- Verify the future PancakeSwap pair and LP-lock evidence before trading or relying on liquidity claims.

08 Risks & Disclosures — Continued

Crypto assets are highly volatile and may lose substantial or all of their value. CATALINA does not guarantee profit, price appreciation, liquidity, listing, utility delivery, or return of capital.

Material risks include market volatility; thin or changing liquidity; smart-contract, wallet, bridge, RPC, or platform vulnerabilities; loss or compromise of Safe signers; governance and execution decisions; phishing or impersonation; changes in laws or platform rules; failure to finalize a sale or create a market; and failure of planned community or ecosystem initiatives to materialize.

IMPORTANT DISCLOSURE

This whitepaper is informational. It is not financial, investment, legal, tax, accounting, or other professional advice, and it is not an offer where such an offer would be unlawful. Obtain independent advice and conduct your own due diligence. This document is not a smart-contract audit or a legal opinion.

Document Status

Publication version 1.2, reviewed 11 August 2026. On-chain balances were checked at BNB Chain block 115,312,223 (2026-08-11 12:24:41 UTC). Live balances, sale status, sale parameters, and platform conditions can change after this snapshot and must be independently rechecked.

This version corrects the governance-balance description, adds the funded PinkSale inventory, records exact vesting dates, distinguishes allocation policy from observed custody, and marks the PancakeSwap pair and LP-lock proof as pending.
